CARNATIONS—This season we are offering the regular greenhouse varieties of carnations. Planted in the garden, giving about 8 to 10 inches of space and good soil well cultivated they should bloom from late July until frost. For winter blooming keep pinched back until late summer, pot up in early fall before frost and bring inside. Given a sunny location and a temperature of 50 to 55 degrees, no warmer, they should bloom all winter.

Pink Abundance, a brilliant rose pink. **Salmon Spectrum**, a beautiful salmon pink. **Matchless**, pure white. **Radiolite**, splendid bright scarlet.

CHRYSANTHEMUMS—The large flowered, fancy sorts may be developed under glass to perfection but with a little care will produce magnificent flowers in the garden. Pinch tops out of young plants and allow not more than three main stems to develop, keeping them well tied up when others appear select strongest bud and rub off all others. The mid- and all lateral branches pinched out. Pinch out first bud to appear and season and late varieties should be lifted with large ball of earth before frost and brought inside to bloom. Treated in this way you may have bloom to be proud of.
